

Building the Future with Tech

Two decades of hard work and research have enabled us develop and launch a prestigious international software package called atACC ERP, which has been globally accepted, for easing the day-to-day business operations of different kinds of business segments like retail and wholesale traders, manufacturers, restaurants, mobile or computer shops, construction companies, hotels, service centres etc. Started in 2002 in Kerala, India we have been able to launch our international office in Dubai, UAE recently.

Though mainly in product development, we are also in project development (services) and we have expertise in .Net and Android applications. atACC ERP can be used in many other segments customising it at a minimum level to fit cent percentage for those companies.

In spite of having inherent provisions in itself for converting to different world languages, an Arabic version of atACC was released recently.
